

## Installation Guide - Slug and Found

Installing Project:

Clone Git Repository

Install NodeJS (<https://nodejs.org/en/download/>)

Run 'npm install'

Run 'npm start'

User Manual:

- Sign up using @ucsc.email, creating a password, and uploading a profile image.
- Login, if you have previously signed up for Slug and Found.
- Website opens on HomePage, which can also be navigated back to using sidebar.
- To search through posts, type into search bar.
- To see description, location, and who submitted the post, user may click on post to see this information.
- To navigate to other links, click on the toggle which opens up side bar.
- The profile page, which can be reached through profile picture, username, or profile link, renders user's previous posts, their profile picture, and allows them to change their picture, if it is their own profile page they are on.
- Clicking on messages allows user to see previous messages with other users.
  - The messages page does not provide a new message button to ping someone else.
- New post allows user to create a post, for which they have the freedom to write about the item lost/found, where, and upload an image.
- To send a message to another user, the user must click on a post, click on the user that submitted the post, and then once they are on their profile, they can message them.
- Users can delete their own posts, but not other users.
- Sign out allows user to sign off of Slug and Found.

To run tests:

Run 'npm test' to run test files. Press 'a' to run all tests.
